

Dock Project 2 (Priority #2)

- Strengthen Dock C3 (Ernie and Les's Dock)
- Hammer in a new post or raise dock and Bolton a 2 x 8 stringer

Post or reinforcement needed here.

Rationale

- Dock is very unsafe and could collapse under weight
- Members (Ernie and Les) currently use their slips
- Collapse of dock could choke boat traffic in that section

Equipment Needed

- Floats (in Basin)
- Post (one is lying on D. Olson's dock or next to Brower building)
- U-Bolts (in club house) and 2 x6 or 2 x 4 stringer (by Brower building)
- Post pounder (in club house), wrenches, drills w/ bits, power saw
- Come-alongs with chains

Suggested Crew: 6-8

Comments

Dock has begun to sag to the point where it is extremely unsafe if it bears any weight. The ideal situation would be to raise the dock, pound in additional posts at the sag point and attach a new riser underneath. If this can't be done, then we need to raise the dock with come-alongs and chains and then bolt 2 x 8s underneath to the side of the frame for rigidity.

Estimated time for completion with eight-man crew: 2-3 hours
